The geologic turn: architecture's new alliance

Abstract
Recent research and practice in the fields of architecture, art, and philosophy suggest the increasing influence of geology with the design disciplines, visual arts, and theoretical humanities. The symposium A Geologic Turn: Architecture's New Alliance, curated by Etienne Turpin, Ph.D., as part of the Sanders Research Fellowship at the Taubman College of Architecture & Urban Planning, University of Michigan, bring together researchers, scholars, and practitioners whose work is at the center of this fecund transdisciplinary trajectory. The objectives of the symposium are to encourage new productive connections among current scholarship and practice, and to expose this new transdisciplinary research to Taubman College for discussion and debate.

THE GEOLOGIC TURN
Architecture’s New Alliance

Current research in the fields of architecture, art, science and technology studies, and philosophy suggests the increasing influence of geology with the design disciplines, visual arts, and theoretical humanities. The symposium brings together researchers, scholars, and practitioners whose work is at the center of this fecund transdisciplinary trajectory in the age of the Anthropocene.
