ACKNOWLEDGMENTS

This thesis may not have been successfully completed without the combined assistance of my family, friends, coal exploration and mining companies, and the staff of the Departments of Geology and Mining Engineering. I express my gratitude to my parents and parents-in-law for their encouragement and financial support throughout my academic undertakings and to my wife Fathima and son Ijaz for their patience and encouragement at all times, especially under stressful situations.

Various stages of this research project was supervised by Dr A.C. Hutton, Assoc Profs B.G. Jones and N.I. Aziz, and Prof A.C. Cook; their time and affability is greatly appreciated, especially:

Dr A.C. Hutton for his enthusiasm and who was friendly but critical at all times and patiently read and re-read all versions of the thesis; his prompt response to most of my requests, including access to some of his own data, is appreciated.

Assoc Prof B.G. Jones for his assistance with cluster analyses and editing many of the chapters.

Assoc Prof N.I. Aziz who provided excellent facilities for gas sorption-desorption testing at the Mining Engineering Department and editing Chapter 5.

Prof A.C. Cook who, before his resignation, was the initial supervisor when this research started as a contract study for NERDDP conducted by Kembla Coal and Coke Ltd.; my part in that project was supervised by Prof Cook.

I sincerely thank the following people and organisations (in no specific order):

Associate Professor A.J. Wright and staff of the Department of Geology, for their co-operation and provision of an amicable setting and facilities.

Management of AGL Petroleum, BHP Collieries, Electricity Commission of New South Wales, Kembla Coal and Coke, Metropolitan Colliery and Department of Minerals and Energy who provided data and samples for laboratory experiments from Cordeaux, Metropolitan, Tahmoor, Tower and Wongawilli Collieries in N.S.W. and Collinsville, Cook, German Creek, Norwich Park and Peak Downs Collieries in Queensland.

Drs B. Agrali, R.D. Lama, D. Titheridge and I. Stone, and Messrs J. Anderson, M. Bocking, B. Clark, J. Hanes, P. Lamb, P. Maddocks, and J. Wood for their willing assistance in providing information and samples for this research project.

Dr J. Bambery who provided most useful information on the Southern Coalfield from his thesis and for his encouragement; he also helped draft
my first base map.

Dr N. Sherwood and Mr. Chairul Nas for their help with some of the statistical methods.

Mr. H. Memerian for his constructive criticisms and useful suggestion on parts of Chapters 3 and 7.

Mr Ian Laird for the technical assistance given during gas sorption-desorption testing.

Messrs David Carrie and Max Perkins for their technical assistance with SEM work, computers and photography.

Mr. Aivars Depers for help with microscopy and laboratory techniques as well as rescuing me many times with help finding useful but obscure references.

Dr Tony Pandolfo of CSIRO Division of Coal and Energy Technology, Lucas Heights, for his assistance with porosity and surface areas measurements.

Mrs Barbara McGoldrick and Ms Therese Carmody, the present and former secretaries of the Geology Department, for being affable and supportive at all times.

Drs H. Pangabean, Hadiyanto, Messrs Bukin Daulay, Yos Dirasutisna, Herudiyanto, Yunus Kusumabrata, Subaktian Lubis, Andrew Mandile, Tito Ratkolo, Susilohadi and numerous other postgraduate colleagues for their assistance in various ways.

This research project was mainly self-funded through the help of my parents-in-law and casual employment. All those people responsible for providing me casual work are acknowledged.
