Acknowledgements

Professors Barry Harper and John Hedberg have given me support well and above the call of duty throughout this project. Their continuing encouragement has always been a mainstay stimulant for me, and it is very much appreciated.

So many people, colleagues and peers alike, have aided me in one way or another. First, the informants: the participating student teachers and the schoolchildren who were to become known as the NetKids; their totally committed class teacher, Karene Harris; the staff of IMML for technological support. Second, my special friend Robert Kaplan and all those many friends who further stimulated me throughout this study.

I thank my wife Ginetta, and my family for their input by way of their tolerance of all the common scholastic mood swings that dissertation projects are generally accompanied by.

I dedicate this work to my youngest grandchildren Declan, Bridee and Caden who so often dragged me from my machine to “play” with them in those moments of hilarious rough and tumble havoc that only young children can create. And I publicly acknowledge the intervention of St Jude who never put me “on hold” at those times when I would make emergency support calls to him.
This study explores the possibilities of utilising the World Wide Web, by way of the Internet, to benefit learners in the creation of knowledge. It examines way and means of gathering and collating productive resources in order to enrich learner understanding and interpretation of Information Technology as such.

There are several phases to this study. There is a review of the history of the World Wide Web (WWW); an account of the structure of the study, known as the Web Inquiry Project (WIP); a review of information retrieval mechanisms; observations of student teachers in the context of their own understanding of the WWW and their appraisals of its worth as learning tool; studies in their subsequent tutoring of a cohort of elementary school students, their individual and collective observations, findings and resources constructed on their individually created web pages. All of this to be achieved in the spirit of collaborative learning.

It is a narrative account of the journeyings of all the participants through the Information Superhighway and an account of the outcomes of this exploratory study and the methodology for achieving best practices in information gathering and its utility in the interest of knowledge creation in this electronic age.
## Table of Contents

### Chapter 1

**Knowledge production in an irresistible Information Society**

- Purpose of this study
- The retrospective generalised, philosophical, learning arena
- A conjectural perspective
- The research strategy
- Sources of data compiling
- Constraints and limitations to interpreting this study
- Definition of terms
- The Web Inquiry Project
- The significance of the problem
- Outline of thesis structure

### Chapter 2

**World Wide Web: Road to Damascus or Yellow Brick Road?**

- Genesis of the World Wide Web
- Flatbed printing
- Trails to computer networking: The knowledge maker
- What is the World Wide Web?
- Chronicle of the Internet: 1957 - 1995
- The necessary digitised language
- How does its evolved structure work: mechanism of the Web?
- Hypertext Markup Language Counterpart
- Browsers: delivering the data
- Browsing facilities
- Separating the concepts: Internet and the Web
- Listservers: Dedicated partners
- Who are the World Wide Web's principal players?
- The World Wide Web and Scholars
- Summary

### Chapter 3

**World Wide Web: Its engines of creation**
Chapter 5

Constructing knowledge on the Web................................................................. 101

Part One............................................................................................................. 101

How do we know what we don’t know?......................................................... 105

For ...................................................................................................................... 108

Against ............................................................................................................. 108

The Superhighway: Constructivism at the crossroads................................. 109

Exercise and Connotation of Constructivism............................................... 111

Intelligence Tests............................................................................................. 115

Engines for Education..................................................................................... 117

ACOT............................................................................................................... 117

Drilling Holes................................................................................................. 118

Implications .................................................................................................... 118

INFORMATION TECHNOLOGY AS A LEARNING-TEACHING VEHICLE
.......................................................................................................................... 123

When “strangers” cooperate........................................................................... 124

Reflective Journeying: Player 1 ..................................................................... 127

Reflective Journeying: Player 2 ..................................................................... 134

Reflective Journeying: Player 3 ..................................................................... 142

Reflective Journeying: Player 4 ..................................................................... 153

Reflective Journeying: Player 5 ..................................................................... 162

Reflective Journeying: Player 6 ..................................................................... 167

Summation ...................................................................................................... 174

Chapter 6

Constructing knowledge using the Web........................................................ 178
Chapter 7
Constructing knowledge and the Web .............................................. 237
Analysing the outcomes of the WIP: Methodology .......................... 238
Anecdotal feedback: colloquials .................................................. 239
The Research Questions .................................................................. 240
Guiding questions reiterated: ...................................................... 243
Perceived contributions ............................................................... 247
Future research .............................................................................. 250
APPENDIX A ...................................................................................... i
