2000
DECLARATION

I, Shirley F. Corrent Agostinho, declare that this thesis, submitted in fulfilment of the requirements for the award of Doctor of Philosophy, in the Faculty of Education, University of Wollongong, is wholly my own work unless otherwise referenced or acknowledged. The document has not been submitted for qualifications at any other academic institution.

Shirley F. Corrent Agostinho
4 September 2000
ACKNOWLEDGMENTS

What an incredible challenge this has been. I wish to express my gratitude to the following people who helped me realise this achievement.

I would like to thank my former employer, Dr Ian Reinecke, and my supervisor Professor Barry Harper, for their confidence in me when I approached both of them all those years ago to ask their advice about pursuing doctoral studies.

I am very grateful and fortunate to have been supervised by two leading experts in the field of Educational Technology. To Professor John Hedberg and Professor Barry Harper—thank you for your constant encouragement, guidance, support and patience!

To Christine Brown—thank you so much for all those peer debriefing sessions. Your empathy of the qualitative research process always gave me renewed enthusiasm.

I would like to thank the participants in the two cases of this study for their willingness to participate in this research. Thank you to the student member checkers for taking the time to review the detailed case study reports. Your feedback was invaluable. Thank you also to Sue Bennett for verifying my CMC content analysis.

Finally and most importantly, I wish to express my deepest gratitude to my family. To my parents, Bruno and Gemma, thank you for always being there for me. I would like to dedicate this work to my wonderful mother. You are a very special person. Without you, I could not have achieved this. To my daughter, Kara, thank you for your patience and understanding when Mamma had to work on “her thesis”. I hope that you will be proud of me. To my husband, Emidio, thank you for your unshakeable belief that I could do this. You always helped me to stay motivated especially during the times when it all seemed too hard. Thank you for always listening. Thank you for always being there. Thank you for putting up with so much for so long!
ABSTRACT

The educational technology literature is replete with claims that the use of the World Wide Web has the potential to revolutionise education, yet there is little research that substantiates these claims. The literature highlights a gap between visionary rhetoric and current practice. It is argued that such a gap exists because there is not enough detailed description provided about Web-based innovations at the level of interaction and pedagogy. This study addresses this gap by examining the interactions established among students and an instructor in a postgraduate subject delivered using World Wide Web and videoconferencing technologies. The purpose of the study is to inform the evolution of pedagogical strategies for Web-based learning environments. The method of inquiry was a collective case study comprising two cases, which were two implementation cycles of the same subject. Both cases involved two geographically separated groups of students and the technology was used to facilitate interaction between the two groups. The insights gained from the first case were used to redesign the teaching and learning environment for the second case. Data collection occurred through participant observation. Interviews and questionnaires were conducted; documents and artifacts were collected. Data analysis involved the identification of themes and computer-mediated communication (CMC) content analysis. Three questions guided the investigation. (1) What kind of interaction can be established in a technology-supported learning community? (2) What is possible in the technology-supported learning environment that is not possible without the use of technology? (3) What are the perceptions of the instructor and the learners in terms of the learning outcomes generated?

In both cases students interacted with the instructor, with each other and with the content. However, the way in which interaction occurred differed for each case. The role technology played, the subject structure and delivery, and the nature of the assessment tasks, surfaced as influential factors. The use of the technology facilitated opportunities for collaborative learning not easily achieved in conventional face-to-face settings. The instructor perceived effective learning outcomes were generated in both cases and the students in both cases viewed the subject as a positive learning experience although the learning process presented challenges.

The conclusions drawn from this study are: both cases represented a Web-based constructivist learning environment; the change in pedagogy from Case One to Case Two represented pedagogical re-engineering; computer conferencing should be considered in postgraduate subjects as a “means to an end” not an “end in itself”; and there is no single generically applicable CMC analysis technique—it depends on the context in which CMC is used.

CHAPTER 1: RATIONALE FOR THIS STUDY 1
1.1 Introduction 1
1.2 Background 1
1.3 Issue that Requires Investigation 4
1.4 Purpose Statement and Research Questions 5
1.5 Research Strategy and Rationale 6
1.6 The Context of this Study 7
1.7 Significance of the Study 8
1.8 Limitations of the Study 8
1.9 Thesis Structure 9

CHAPTER 2: THE USE OF THE WORLD WIDE WEB IN HIGHER EDUCATION 10
2.1 Introduction 10
2.2 All Aboard the WWW Bandwagon 11
2.3 “Rhetoric” Versus “Research” 19
2.4 The Many Faces of Web-Based Instruction 52
2.5 Interaction and Pedagogical Strategies 62
2.6 Interactions in a Postgraduate Context 65
2.7 Conclusion 66

CHAPTER 3: RESEARCH METHODOLOGY 68
3.1 Introduction 68
3.2 Research Context—The Emergence of the Two Cases 69
3.3 Research Design 71
3.4 The Process of Data Collection and Data Analysis 83
3.5 Rationale for Judging the “Quality” of this Study 102
3.6 Summary 114
## CHAPTER 4: CASE ONE—EDGA957 1996

2.1 The use of the World Wide Web in Education: Features and Affordances (The researcher’s synthesis of the literature)  
2.2 Examples of research studies that examine/evaluate Internet-based learning implementations in university subject offerings  
2.3 Examples of research studies that evaluate the effectiveness of Web-based learning  
2.4 Computer-mediated communication—Perceived educational benefits and limitations  
2.5 CMC Research—A synthesis of research findings (Romiszowski & Mason, 1996, p. 443-448)  
2.6 A synthesis of literature about computer conferencing as an aspect of course design—Compiled by Collis (1996b, p. 448-449)  
2.7 Research on CMC—A snapshot of research conducted from 1996 to 2000  
2.8 Framework that illustrates the various applications of Web-Based Instruction (Based on Bannan-Ritland et al. 1998)  
2.9 Web-based Instruction design models—Examples from Khan (1997b)  
2.10 Examples of design model principles from the literature  
3.1 Theoretical framework to situate this research study within the Qualitative Research literature  
3.2 Naturalistic Inquiry Paradigm—The three mandatory requirements (Based on Lincoln & Guba, 1985)  
3.2.1 Naturalistic Inquiry Paradigm—The five axioms (Based on Lincoln & Guba, 1985)  
3.3 Characteristics of Qualitative Case Study Research  
3.4 Definition of Collective Case Study presented by Stake (1994, 1995, 1997)  
3.5 The five types of data collected in this study  
3.6 Role of the researcher during data collection  
3.7 Data collected prior to commencement of each subject  
3.8 Case One: Data collected during the subject (14 weeks plus a two-week semester break)  
3.9 Case Two: Data collected during the subject (14 weeks plus a two-week semester break)  
3.10 Data Collected for both cases after completion of each subject

viii
3.11 Level of analysis that can be performed in Case Study Research—
A framework developed by the researcher (Based on Merriam, 1988)

3.12 Quality criteria for a qualitative inquiry—A framework
developed by the researcher

3.12.1 Comparative summary of “Trustworthiness” rubrics used in
conventional scientific inquiry and naturalistic inquiry (Adapted
from Erlandson et al. 1993; Lincoln and Guba, 1985)

3.12.2 Establishing Trustworthiness—Techniques applied in this study
(Based on Lincoln and Guba, 1985)

3.13 Examples of peer debriefing sessions held during the study

3.14 Organisational structure of electronic research audit trail compiled
for this study

4.1 Case One: Student profile of the Wollongong class

4.2 Case One: Student profile of the Sydney class

4.3 Case One: Summary of discursive tools used during the subject

4.4 Case One: Critical incidents that influenced student interaction

4.5 Case One: Strategy and tools used by the instructor in the first
five weeks of the subject

4.6 Case One: Strategies and tools used by students to provide
the class with a learning experience

4.7 Case One, Week 12: Messages posted in the Discussion Forum
(67 messages posted in total)

4.8 Case One: Student feedback about the subject being a positive
learning experience

4.9 Case One: Student feedback about the frustration and stress
experienced during the subject

4.10 Case One: Mary rises to the challenge—she saw the
transferability of her experiences in the subject to her workplace.
She realised during the subject that she was learning by doing.

4.11 Case One: Student feedback about the use of technology in the
subject

4.13 Case One: Internet access details for each student

4.14 Case One: Student feedback about technical support provided
in the subject

4.15 Case One: The use of videoconferencing

4.16 Case One: Examples that illustrate how student familiarity
with content influenced the interaction that occurred in the
videoconferencing sessions

4.17 Case One: Student feedback about the videoconferencing
4.18 Case One: Strategies employed when using the Live Chat and Discussion Forum tools
4.19 Case One: Examples of suggestions for improvement offered by students in their evaluation of the subject
5.1 Case Two: Student profile of the Wollongong class (on-campus class)
5.2 Case Two: Student profile of the Sydney class (the off-campus)
5.3 Case Two: Chronological representation of the subject structure
5.4 Case Two: Summary of CMC tools used during the subject
5.5 Case Two: Seven Subject Episodes
5.6 Case Two, Week 2: Four discussion threads created by the instructor in Discussion Forum
5.7 Case Two: Student feedback from end-of-subject questionnaire (Question 14)
5.8 Case Two: Student feedback from end-of-subject questionnaire about the usefulness of the first online asynchronous group task (Question 14)
5.9 Case Two: Discourse categories that emerged in the first online asynchronous group task (Based on Henri, 1992, 1996)
5.10 Case Two, Subject Episode 2: Group 1—Messages posted in the Discussion Forum
5.11 Case Two, Subject Episode 2: Group 2—Messages posted in the Discussion Forum
5.12 Case Two, Subject Episode 2: Group 3—Messages posted in the Discussion Forum
5.13 Case Two, Subject Episode 2: Group 4—Messages posted in the Discussion Forum
5.14 Case Two: Excerpts from the Live Chat space from Weeks 1 to 3
5.15 Case Two: Synchronous Live Chat session, Monday Week 5—Participant entry and exit times, time spent online and number of messages posted by each participant
5.16 Case Two: Synchronous Live Chat session, Monday Week 5—The five discourse “moves” that occurred online
5.17 Case Two, Subject Episode 4: An additional discourse category—Metacognitive emerged in the online asynchronous class discussion about the article by Gayeski. (Based on Henri, 1992, 1996)
5.18 Case Two, Subject Episode 4: Asynchronous online class discussion about the article by Gayeski
5.19 Case Two: Student feedback from end-of-subject questionnaire about possible reasons for the lack of online discussion that occurred (Question 9a)

5.20 Case Two: Examples of student feedback from end-of-subject questionnaire that illustrate what the students thought about the concept of the non-meeting weeks (Question 8)

5.21 Case Two: All respondents in end-of-subject questionnaire thought asynchronous online discussion can assist in the learning process

5.22 Case Two: Results from Question 16c in end-of-subject questionnaire

6.1 Pedagogical Profile of the Two Cases

6.2 Summary of interaction established in Case One

6.3 Summary of interaction established in Case Two

6.4 Summary about the interaction established in both cases

6.5 Summary of suggest cooperative learning technique for the Web (Bonk & Reynolds, 1997, p. 173)

6.6 Student feedback—Suggestions for subject improvement in Case One

6.7 Examples of student feedback from end-of-subject questionnaire in Case Two

7.1 Demonstration of learning outcomes generated in this study (Based on the learning outcome taxonomy developed by Jonassen & Tessmer, 1996)

T.1 Case One, Week 11: David’s online task—The number of messages posted in each thread and student participation in each thread

T.2 Case One: Student feedback about the class process in Week 11

W.1 Discussion threads created in the Discussion Forum during Case Two (Thirteen threads created in total)

W.2 Discussion threads created in DISCUS during Case Two

W.3 Email messages sent to the subject email listserver during Case Two (Twelve messages posted in total)

Y.1 Case Two: The three discussion threads created in the Discussion Forum during the first on-campus class

Y.2 Case Two, Week 1: Discussion Forum—Sample messages from Thread: Concepts of Implementation
