Learning through Simulated Practice-An exploration of the learning process

Angela Hope
Senior Lecturer
Practice and Skills Co-ordinator
University of Huddersfield
Doctorate Supervisor’s Professor Annie Topping, Dr Jean Nhemachena
Learning through Simulated Practice-An exploration of the learning process

Background:

- Pre-registration Nursing Students learning through Simulated Practice
- Personal observations supported by peers
- Examination of attendance figures in theory and simulation teaching
- Lack of ability around numeracy and literacy
- Evaluation studies
Learning through Simulated Practice-An exploration of the learning process

Background
Studies have shown that students learning through Simulation teaching strategies:
- show reluctance to leave at the end of the session
- State that it’s fun!
- State that they learn more in two hours in the labs than in 4 hours theory
- It is about applying the theory in practice

Inspiring tomorrow's professionals
Learning through Simulated Practice-An exploration of the learning process

Why?

• What is it about the strategy/learning environment that stimulates the students?
• Learning through play? Fun element
• How much learning takes place?
• What do the theorists say?
Learning through Simulated Practice-An exploration of the learning process

Maria Montessori  (1870-1952)
The first female physician in Italy (1896)
Developed a method of learning based upon self direction
Initially observed children with Learning Disabilities from the age of 3-6 years
Recreated a house for children which focussed as a learning environment
Learning through Simulated Practice—An exploration of the learning process

Maria Montessori

- Children are encouraged to learn through exploration
- Learning takes place through ‘experience’
- Use of actual implements (i.e. Sharp knives)
- Deep learning occurs when they learn through using their hands
- Development nurtured as an individual at their own pace
Learning through Simulated Practice—An exploration of the learning process

Maria Montessori—8 insights
1. Movement and cognition
2. Choice
3. Interest
4. Extrinsic awards avoided
5. Learning with and from peers
6. Learning in context
7. Teacher ways and wild ways
8. Order in mind and education
Learning through Simulated Practice-An exploration of the learning process

Implications for Clinical Skills:
• Deep learning through working with their hands (the doing)
• Learning with and from peers
• Learning in context
• Order in environment and mind
• Learning through experience

Intervention becomes less and less as development occurs

Montessori Method is a ‘guided philosophy for life’

Lillard (2005)
Five Critical Attributes of Simulation in Practice

1. Creating a hypothetical opportunity
2. Authentic representation
3. Active participation
4. Integration
5. Repetition, evaluation and reflection

Bland 2010 (publication pending)
Learning through Simulated Practice-An exploration of the learning process

Study focus
Research Question:
“How does the facilitator in Simulation know that students know?”
Students & educators
Qualitative methods
- Participant observation
- Interviews
Learning through Simulated Practice-An exploration of the learning process
