ACKNOWLEDGMENTS

To my supervisor, Professor Michael J R Gaffikin, I wish to thank you for allowing me the intellectual freedom to explore and enjoy this journey and for the privilege of being part of your vision. To Jane Broadbent, Richard Laughlin, Norman Macintosh, Leslie Oakes, Alistair Preston and Hugh Stretton, thank you for your constructive feedback on earlier drafts of parts of this thesis. I am also grateful to my colleagues for their encouragement and consideration. I wish to acknowledge the cooperation of all the interviewees of the South Australian Housing Trust (past and present) and Department of Housing and Urban Development, who were generous with their time and made this thesis possible and worthwhile.

ABSTRACT

This is a critical reflexive ethnography of the South Australian Housing Trust (SAHT) between 1991-1994. The SAHT was established as a statutory authority with dual roles, which were to provide affordable housing to low income earners and to do so in a manner which contributed to the state's overall social and economic welfare. These dual roles influenced the culture of the organization and act as a context in which to analyse and understand a number of events. The SAHT's internal predisposition to change helped it to respond to reduced government funding and a change in general managers by undergoing structural changes. Laughlin's (1991) organizational change model is used to identify and classify these changes as first order, re-orientation. LOCM accommodated the use of reflexivity to expose and understand the processes by which accounting information systems influenced the changes to the SAHT's structure and culture. By contrast the changes resulting from the implementation of the public sector reforms were externally imposed and split the organization into two separate entities, thus decoupling the SAHT's humanitarian and business roles. The rhetoric of managerialism to procure change claimed objectivity and used accounting information systems to achieve the imperatives of accountability and transparency. The ideological impact of economic rationalism was disguised as merely offering functional clarity in order to understate the significance of these changes. LOCM was used to demonstrate the significance of this colonization as it had the consequence of disempowering the organization.
